The time period for reply, if any, is set in the attached communication.

# Office Action Summary

**Application No.**

10/667,368

**Applicant(s)**

NOGUCHI, TAKAFUMI

**Examiner**

JACOB Y. CHOI

**Art Unit**

2885

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 06 February 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-8 and 10-23 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-8 and 10-23 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 15 June 2007 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
- 1) ☒ Certified copies of the priority documents have been received.
  - 2) ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - 3) ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-646)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_

## DETAILED ACTION

### ***Examiner's Comment***

The pre-brief conference requested on February 6, 2008 was decided among examiner, Jacob Y. Choi, his supervisors, James Lee, and David Blum. During the conference, issues of 35 USC § 112 was discussed which will be further explained below. The prior art rejection(s) will mainly remain the same but differently rejected due to given no patentable weight to claimed limitations of "... *wherein a minimum light-emission value is equal to or less than 50% of a maximum light-emission value when white light is emitted from said light-emitting portion*". The applicant's representative is advised to phone the examiner if there are questions upon receiving the following action.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims **1-23** are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The subject matter of "... *wherein a minimum light-emission value is equal to*

*or less than 50% of a maximum light-emission value when white light is emitted from said light-emission portion*", which does not set forth the best mode contemplated by the inventor, which enables any person skilled in the art to make use of. To further clarify, applicant(s) failed to describe his invention, where a diffraction grating structure may only improve the light-emission value equal to or less than 50%. In other words, 0% of a maximum light-emission value is sufficient to make and use of this particular device, a diffraction grating structure. Appropriate correction(s) are required.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims **1-23** are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claim(s) are narrative in form and replete with indefinite and functional or operational language. The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device. To further clarify claimed subject matter of "... wherein a minimum light-emission value is equal to or less than 50% of a maximum light-emission value when white light is emitted from said light-emission portion", is considered indefinite. The linking term "*when*" and the following function/structure is considered indefinite since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. Appropriate correction(s) are required.

### ***Claim Objections***

Claim 4 is objected to because of the following informalities: It has been held that the recitation that an element is “*capable of*” performing a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re Hutchison*, 69 USPQ 138. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**Note:** Claims in a pending application should be given their broadest reasonable interpretation. *In re Pearson*, 181 USPQ 641 (CCPA 1974).

Things clearly shown in reference patent drawing qualify as prior art features, even though unexplained by the specification. *In re Mraz*, 173 USPQ 25 (CCPA 1972).

Claims 1-8 and 10-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kobori (USPN 6,327,554) in view of ODA et al. (US 2002/0180348).

Regarding claim 1, a light-emitting portion having a higher refractive index than a refractive index of air (e.g., column 8, lines 20-35; “... *a refractive index being  $n$  1.5 ... a refractive index being 1.8  $n$  2.1 ... index being 1.7  $n$  2.1*”), and wherein a minimum light-emission value is equal to or less than 50% of a maximum light-emission value when white light is emitted from the light-emitting portion (e.g., Figures 12-21; column 2, lines

10-60; "... the changes in the thickness of films forming an organic EL device give rise to changes in the spectra and luminance of light emitted out of the device ... which enables light to be effectively taken out of even a structure comprising many reflective surface")

Kobori failed to specify a diffraction grating structure.

ODA et al. teaches the diffraction grating structure formed as a constituent element on the organic electroluminescent device and provided to a light-emitting side surface (e.g., Figure 2) of the light-emitting outermost surface side of the light-emitting portion (e.g., Abstract: "... a diffraction grating is formed ... on the light output side") and teaches a pitch of a fine convex-concave structure being in various range in  $\mu\text{m}$ .

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify teachings of Kobori with a diffraction grating element of ODA et al. to improve the light extraction efficiency of the device and its viewing angle(s), also it is preferable for the grating structure with less internal reflection by adjusting the index of refraction in order to prevent light emitted from the organic EL being reflected at the grating structure and traveling backward. To further clarify, it would have been obvious to one having ordinary skill in the art at the time the invention was made to optimize the workable range of the diffusion grating to improve the light extraction efficiency of the device, also it is preferable for the grating structure with less internal reflection by adjusting the index of refraction in order to prevent light emitted from the organic EL being reflected at the grating structure and traveling backward, and since it has been held that where the general conditions of a claim are disclosed in the prior art,

discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

Regarding claim 2, Kobori discloses in view of ODA et al. discloses the claimed invention, explained above. In addition, Kobori discloses a color separation filter (e.g., column 20, lines 1-20) provided between the light-emitting portion and the light-emitting side surface, wherein a minimum value of a spectral product obtained from a light-emission waveform of the white light emitted from the light-emitting portion and a spectral transmittance of the color-separation filter is equal to or less than 50 % of a maximum value (*at least 50 % in a wavelength region of 300 to 700 nm*) thereof, whereby the minimum light-emission value is equal to or less than 50 % of the maximum light-emission value when the white light is emitted from the light emitting portion.

Regarding claim 3, Kobori discloses in view of ODA et al. discloses the claimed invention, explained above. In addition, Kobori discloses a color-separation filter (e.g., column 20, lines 1-20), which has minimum transmittance of equal to or less than 50 % of maximum transmittance is used for the color-separation filter.

Regarding claim 4, Kobori discloses in view of ODA et al. discloses the claimed invention, explained above. In addition, Kobori discloses the light-emitting portion includes light-emitting materials for at least two primary colors capable of emitting the white light among light-emitting materials for three primary colors.

Regarding claim 5, Kobori discloses in view of ODA et al. discloses the claimed invention, explained above. In addition, Kobori discloses a light-emission ratio of the light-emitting materials for the at least two primary colors among the light-emitting materials for the three primary colors is adjusted to make the minimum light-emission colors is adjusted to make the minimum light-emission value equal to or less than 50 % of the maximum light-emission value when the white light is emitted from the light-emitting portion.

Regarding claim 6, Kobori discloses in view of ODA et al. discloses the claimed invention, explained above. In addition, Kobori discloses the light-emitting portion includes the light-emitting materials for the three primary colors.

Regarding claim 7, Kobori discloses in view of ODA et al. discloses the claimed invention, explained above. In addition, Kobori discloses the light-emitting materials exhibit light emission by singlet exciton (e.g., column 16, lines 5-10).

Regarding claim 8, Kobori discloses in view of ODA et al. discloses the claimed invention, explained above. In addition, Kobori discloses the light-emitting materials exhibit light emission by triplet exciton (e.g., column 16, lines 5-10).

Regarding claim 10, Kobori discloses in view of ODA et al. discloses the claimed invention, explained above. In addition, ODA et al. discloses a ratio of the depth to the pitch in the fine convex-concave structure ranges from 0.1-10 [0037]. As explained above, it would have been obvious to modify teachings of Kobori with a diffraction grating element of ODA et al. to improve the light extraction efficiency of the device.

Regarding claim 11, Kobori in view of ODA et al. discloses the claimed invention, explained above. In addition, Kobori discloses the light-emitting portion includes light-emitting materials (e.g., column 20, lines 1-20; "... *an optical thin film such as a dielectric multilayer film may be used ... gives out light from the phosphors contained therein for the color conversion of light emission, and is composed of three components, a binder, a fluorescent material and a light absorbing material*") for at least two primary colors emitting the white light among light-emitting materials for three primary colors.

Regarding claim 12, Kobori in view of ODA et al. discloses the claimed invention, explained above. In addition, Kobori discloses a color-separation filter (e.g., column 20, lines 1-20; "... *the substrate may be provided with a color filter film ... it is preferable to control the properties of the color filter in conformity to the light emitted from the organic EL device ... thereby optimizing the efficiency of taking out light emission and color purity*").

Kobori failed to suggest a spectral transmission of the color-separation filter is proximately 7% of a maximum value.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to specify the spectral transmission of the filter, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Regarding claim 13, Kobori in view of ODA et al. discloses the claimed invention, explained above. In addition, Kobori discloses the combination of the light-emitting

portion and the color separation filter suppresses the transmitted light to extent in the wave range  $\pm 25$  nm or more apart from the maximum light emission wavelength of the light-emitting materials (e.g., column 8, lines 20-60; "... a wavelength region of 300 to 700 nm).

Regarding claim 14, Kobori in view of ODA et al. discloses the claimed invention, explained above. In addition, Kobori discloses a color separation filter provided between the light-emitting portion and the light-emitting side surface, wherein a minimum value of a spectral product obtained from a light-emission waveform of the white light emitted from the light-emitting portion and a spectral transmittance of the color-separation filter is approximately 2% of a maximum value thereof (e.g., column 8, lines 20-60; "... a luminance variation n is confined within  $\pm 5\%$ ).

Regarding claim 15, Kobori in view of ODA et al. discloses the claimed invention, explained above. In addition, Kobori discloses the light-emitting portion comprising, a glass substrate (e.g., "p-layer"), a transparent electrode formed on one side of the glass substrate, a light-emitting layer (e.g., "de") formed on the transparent electrode and a rear electrode formed on the light-emitting layer (e.g., Figure 3). And ODA et al. teaches the diffraction grating structure is formed on the other side of the glass substrate [0006, 0049, 0052] that is the light-emitting outermost surface of the light-emitting portion (e.g., Figure 2). As explained above, it would have been obvious to modify teachings of Kobori with a diffraction grating element of ODA et al. to improve the light extraction efficiency of the device.

Regarding claim 16, Kobori in view of ODA et al. discloses the claimed invention, explained above. In addition, Kobori discloses a color separation filter (e.g., column 20, lines 1-20) formed between the glass substrate and the diffraction grating structure. It has been held that rearranging parts of an invention involves only routine skill in the art. *In re Japikse*, 86 USPQ 70.

Regarding claim 17, Kobori in view of ODA et al. discloses the claimed invention, explained above. In addition, ODA et al. discloses the diffraction grating structure is obtained by providing the fine convex-concave structure to the surface of the other side of the glass substrate. As explained above, it would have been obvious to modify teachings of Kobori with a diffraction grating element of ODA et al. to improve the light extraction efficiency of the device.

Regarding claim 18, Kobori in view of ODA et al. discloses the claimed invention, explained above. In addition, ODA et al. discloses the diffraction grating structure is formed by bonding an optical film separately manufactured as a transmission type optical film that has the fine convex-concave structure to the other surface of the glass substrate. It has been held that constructing a formerly integral structure in various elements involves only routine skill in the art. *Nerwin v. Erlichman*, 168 USPQ 177, 179. As explained above, it would have been obvious to modify teachings of Kobori with a diffraction grating element of ODA et al. to improve the light extraction efficiency of the device.

Regarding claim 19, Kobori in view of ODA et al. discloses the claimed invention, explained above. In addition, ODA et al. discloses the diffraction grating structure is

obtained by providing the fine convex-concave structure. It has been held rearranging parts of an invention involves only routine skill in the art. *In re Japikse*, 86 USPQ 70. As explained above, it would have been obvious to modify teachings of Kobori with a diffraction grating element of ODA et al. to improve the light extraction efficiency of the device.

Regarding claim 20, Kobori in view of ODA et al. discloses the claimed invention, explained above. In addition, ODA et al. discloses the diffraction grating structure is formed by bonding an optical film separately manufactured as a transmission type optical film that has the fine convex-concave structure to the outer surface of the color separation filter. It has been held that constructing a formerly integral structure in various elements involves only routine skill in the art. *Nerwin v. Erlichman*, 168 USPQ 177, 179. As explained above, it would have been obvious to modify teachings of Kobori with a diffraction grating element of ODA et al. to improve the light extraction efficiency of the device.

Regarding claim 21, Kobori in view of ODA et al. discloses the claimed invention, explained above. In addition, ODA et al. discloses the color separation filter is formed to have a single layer structure. It has been held that forming in one piece an article which has formerly been formed in two pieces and put together involves only routine skill in the art. *Howard v. Detroit Stove Works*, 150 U.S. 164 (1893). As explained above, it would have been obvious to modify teachings of Kobori with a diffraction grating element of ODA et al. to improve the light extraction efficiency of the device.

Regarding claim 22, Kobori in view of ODA et al. discloses the claimed invention, explained above. In addition, Kobori discloses the color separation filter is formed to have a multi-layer structure (e.g., column 20, lines 1-20).

Regarding claim 23, Kobori in view of ODA et al. discloses the claimed invention, explained above. In addition, Kobori discloses the light emitted is substantially white light (e.g., column 23, lines 10-30; "... various wavelengths exist as in white light").

### ***Response to Arguments***

Applicant's arguments filed February 6, 2008 have been fully considered but they are not persuasive.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JACOB Y. CHOI whose telephone number is (571)272-2367. The examiner can normally be reached on Monday-Friday (10:00-7:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jong-Suk (James) Lee can be reached on (571) 272-7044. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
